

# Use Cyber Essentials to secure your business

## 1 Secure configuration

Ensure computers and network devices are set up to prevent unsafe activity.

## 2 Malware protection

Secure your business to prevent spyware, ransomware and viruses.

## 3 User access

Assign user accounts to authorised individuals only. Provide access only to the apps, devices and networks they need to do their job.

## 5 Security update management

Update your software regularly to remove vulnerabilities.

## 4 Firewalls

Protect your devices from the wider internet and ensure only safe and necessary network services can be accessed.
